Preface	<i>page</i> xiii
Acknowledgements	xv
1 A brief history of arthropod pest control	1
Introduction	1
Neolithic agricultural development and pest control	4
Early attempts at pest control	5
Pest control after the sixteenth century	7
The development of modern chemical pesticides	11
The development of integrated pest management	16
Alternatives to chemical pest control	22
High-tech pest control for the twenty-first century	24
Summary	25
Further reading	26
2 Botanical insecticides	28
Introduction	28
Sabadilla	30
Nicotine	32
Quassia	34
Unsaturated isobutylamides	35
Ryanodine	37
Naphthoquinones	38
Rotenone	39
Sweet flag	40
Marigolds	41
Pyrethrum	41
Azadirachtin	43
Essential oils	44
Botanical insecticides developed for use in the west	44
Botanical insecticides in developing countries	47

Summary	48
Further reading	49
3 Modern synthetic insecticides	50
Introduction	50
Early synthetic insecticides	50
Modern synthetic insecticides	52
The synthetic insecticide market	52
Global crop losses and insecticide use	55
Organochlorine insecticides	57
Organophosphate insecticides	62
Pyrethroid insecticides	67
Carbamate insecticides	71
Neonicotinoids	74
Other insecticidal chemical groups	76
Summary	76
Further reading	79
4 Formulation, application and the direct and indirect side-effects of insecticides	81
Introduction	81
Formulation of insecticides	83
Categories of formulation	83
Application of insecticides	88
Direct and indirect side-effects of insecticides	94
Resistance to insecticides	94
Resurgent pests, secondary pests and nontarget mortality	100
Ecosystem side-effects associated with insecticide use	102
Human problems associated with exposure to insecticides	104
Legislation and pesticides	107
Summary	108
Selected further reading	110
5 Biological control agents	112
Introduction	112
Predatory invertebrates	114
Parasitoids	116
Predators	120
Methods for using biocontrol agents	121
Classical biological control	122
Augmentation/inoculation techniques	128
Conserving natural enemies and habitat manipulation	129
Vertebrate biocontrol agents	130
Worldwide results from biocontrol programmes	131
Summary	132
Further reading	133
6 Microbial pest control	135
Introduction	135
Bacteria	137

Fungi	143
Nematodes	147
Protozoa	150
Viruses	152
Summary	157
Further reading	157
7 Pheromones and pest control	159
Introduction	159
Types of pheromone	160
Chemistry of pheromones	164
Formulation of pheromones	165
Pheromone traps	167
Using pheromones	169
Monitoring	169
Mass trapping	171
Mating disruption	173
Lure and kill	174
Other applications of pheromones	175
Development of pheromones for pest control	176
Allelochemicals	177
Summary	178
Further reading	178
8 Insect growth regulators	180
Introduction	180
Arthropod growth and development	180
Juvenile hormone mimics	181
Moulting hormone mimics	185
Chitin synthesis inhibitors	186
Summary	188
Further reading	188
9 Genetic manipulation of pest species	190
Introduction	190
Methods of genetic manipulation	191
Sterile insect release technique	193
Mass rearing	194
Sterilisation	195
Insect release	196
Mating	196
Control of the American screwworm fly	197
Control of the screwworm in Libya	200
Control of the Mediterranean fruit fly	201
Control of the tsetse fly	202
Other species controlled using SIRT	203
Insect orders not controlled by SIRT	203
Summary	203
Further reading	205

10	Host-plant resistance	207
	Introduction	207
	Crop plant development	209
	Secondary plant substances	210
	Types of resistance	212
	Germplasm collections	216
	Techniques for producing resistant plants	218
	Commercialised plants with resistance to pests	221
	Potential problems with host-plant resistance	224
	Summary	227
	Further reading	227
11	Cultural techniques and organic farming	229
	Introduction	229
	Soil cultivation	231
	Clean cultivation	232
	Manuring/fertilising	232
	Irrigation	233
	Crop rotations	233
	Trap crops	234
	Planting date manipulation	235
	Harvest date manipulation	235
	Planting density	235
	Abiotic environmental manipulation	236
	Intercropping	236
	Boosting natural enemy numbers	239
	Organic farming	239
	Sustainable farming	242
	Summary	243
	Further reading	244
12	Integrated pest management (IPM)	246
	Introduction	246
	Defining IPM	247
	Steps involved in establishing an IPM programme	257
	Cotton IPM	259
	Cotton IPM programmes worldwide	261
	Apple IPM	262
	Rice IPM	264
	Vegetable IPM	265
	Greenhouse IPM	266
	The impacts of biotechnology on IPM programmes	268
	Future developments with IPM	269
	Summary	272
	Further reading	273
13	Biotechnology and pest control	275
	Introduction	275
	Species for manipulation	276
	Biotechnological methods	277

Transgenic plants	281
Transgenic predators	286
Transgenic pests	287
Advantages associated with biotechnology for pest control	288
Disadvantages associated with biotechnology for pest control	290
Predictions for future developments	295
Summary	300
Further reading	301
Glossary and commentary on text	302
Arthropod pest index	333
Beneficial species index	335
Subject index	337

Plate sections between pages 144 and 145, and pages 240 to 241.
