Foreword	XIII
<i>J. B. Kaper</i>	
Acknowledgments	XV
Contributors	XVII
Chapter 1 Introduction	I
<i>J. Hacker and J. Heesemann</i>	
Chapter 2 Medically Significant Pathogens	7
<i>J. Heesemann and J. Hacker</i>	
2.1 What Are Pathogens?	7
2.2 Infections of the Oral Cavity	11
2.3 Infections of the Upper and Lower Respiratory Tract ..	12
2.4 Infections of the Gastrointestinal Tract	15
2.5 Infections of the Urinary Tract	17
2.6 Sexually Transmitted Infections	19
2.7 Infections of the Central Nervous System (CNS)	20
2.8 Skin and Wound Infections	23
2.9 Serious Systemic Infections, Sepsis	24
2.10 Pathological Immune Response as a Result of Infection	26
Bibliography	26
Chapter 3 Host Defenses Against Microorganisms: Nonspecific Defenses	29
<i>J. Heesemann</i>	
3.1 Defense Systems Against Infection	29
3.2 Physical Barriers and Normal Flora	30
3.3 Recognition and Tagging of Invading Microbes	32
3.3.1 Locating Invading Microbes	32
3.3.2 The Complement System	35
3.4 Antimicrobial Peptides	38
3.5 Effector Cells of the Innate Immune System	38
3.6 Genetically Determined Infection Susceptibility	41
Bibliography	42
Chapter 4 The Adaptive Immune System	45
<i>J. Heesemann</i>	
4.1 Specific Defenses Against Pathogens	45
4.2 Lymphatic Organs	46
4.3 Antigen-Binding Receptors of B and T Lymphocytes ...	46
Bibliography	52

Chapter 5	Symbiosis, Infection, and Pathogenicity	53
	<i>U. Hentschel and J. Hacker</i>	
	Bibliography	56
Chapter 6	Offensive Pathogenicity Factors	57
6.1	Adhesins (<i>J. Hacker</i>)	57
6.1.1	The Structure of Adhesins	57
6.1.2	The Biological Significance of Adhesion	59
6.2	Invasins (<i>T. Ölschläger</i>)	61
6.2.1	Invasion as a Survival Strategy	61
6.2.2	Trigger and Zipper Mechanisms	62
6.2.3	The Structure of Invasion Systems	62
6.2.4	Eukaryotic Internalization Receptors	65
6.2.5	Signal Transduction and the Cytoskeleton	66
6.2.6	Intracellular Survival	67
6.3	Toxins (<i>J. Reidl</i>)	67
6.3.1	Toxins as Virulence Factors	67
6.3.2	Toxin Structures	68
6.3.3	Membrane-Disrupting Activities of Toxins	70
6.3.4	Internalized Toxins	71
6.3.5	Noninternalized Toxins: Superantigens and Heat-Stable Toxins	74
	Bibliography	75
Chapter 7	Defensive Pathogenicity Factors	77
	<i>R. Haas and M. Hensel</i>	
7.1	Capsules and Slimes	77
7.2	Molecular Mimicry and Modulation of the Immune System	78
7.3	Lipopolysaccharides and O Antigen	79
7.4	Outer Membrane Proteins	81
7.5	Surface Layer	82
7.6	IgA Proteases	84
7.7	Further Enzymatic Activities	85
	Bibliography	86
Chapter 8	Nonspecific Pathogenicity Factors	89
	<i>J. Hacker</i>	
8.1	Iron-Uptake Systems	89
8.2	Extracellular Enzymes	93
8.3	Metabolism and Pathogenicity	94
	Bibliography	95
Chapter 9	Protein Secretion Systems	97
	<i>J. Heesemann and T. Ölschläger</i>	
9.1	Overview on Bacterial Protein Secretion	97
9.2	Secretion System Type I (SST I)	99
9.3	Secretion System Type II (SST II)	99
9.4	Secretion System Type III (SST III)	99
9.5	Secretion System Type IV (SST IV)	103

9.6	Secretion System Type V (SST V)	104
	Bibliography	105
Chapter 10	Microbial Surface Variation and Pathogenicity ..	107
	<i>J. Morschhäuser</i>	
10.1	Phase Variation	107
10.1.1	Phase Variation by Site-Specific Recombination	107
10.1.2	Phase Variation by Differential DNA Methylation	109
10.1.3	Phase Variation by Insertion and Deletion of Nucleotides	110
10.2	Antigenic Variation	112
10.2.1	Antigenic Variation by Site-Specific Recombination	112
10.2.2	Antigenic Variation by Homologous Recombination	114
10.2.3	Antigenic Variation Through Insertion and Deletion of Nucleotides	117
10.3	Mobile Genetic Elements, Amplifications, and Deletions	117
10.3.1	Phase Variation Through IS Elements	118
10.3.2	Gene Amplification	118
10.3.3	Gene Deletions	119
	Bibliography	119
Chapter 11	Regulation of Virulence-Associated Genes	121
	<i>J. Morschhäuser</i>	
11.1	General Mechanisms in Virulence Gene Regulation	121
11.1.1	Regulation of Transcription	121
11.1.2	Regulation Through Termination/Antitermination	124
11.1.3	Differential mRNA Stability	125
11.1.4	Regulation of Translation	127
11.1.5	Posttranslational Regulation Mechanisms	128
11.2	Gene Regulation Through Two-Component Systems	128
11.3	Quorum Sensing Systems	132
11.4	Coordination of Gene Expression	133
11.4.1	Operons	133
11.4.2	Regulons	134
11.4.3	Stimulons	134
11.4.4	Global Regulation Mechanisms	134
	Bibliography	136
Chapter 12	Infection Ecology	137
	<i>J. Hacker</i>	
12.1	Infections and Microbial Ecology	137
12.2	Environmental Signals and Stress	138
12.3	Dormant Variants and Infection	139
12.4	Competition Among Microbes	141
12.5	Reservoirs and Transmission	142
	Bibliography	144

Chapter 13	Parallels Between Plant and Human Pathogens	145
	<i>J. Hacker</i>	
	Bibliography	147
Chapter 14	Evolutionary Infection Biology	149
	<i>J. Hacker</i>	
14.1	Principles of Evolution	149
14.2	New Selection Conditions: New Pathogens	150
14.3	The Clone Concept	152
14.4	Point Mutations, Rearrangements, and Evolution in Quantum Leaps	153
14.5	Horizontal Gene Transfer	155
14.5.1	Transformation and Generation of Mosaic Genes	155
14.5.2	Bacteriophages and Transduction	155
14.5.3	Plasmids and Transposons	156
14.5.4	Pathogenicity Islands and Genomic Islands	158
14.6	Genome Plasticity Versus Genetic Stability	160
	Bibliography	161
Chapter 15	Cellular Microbiology	163
	<i>T. Ölschläger and J. Heesemann</i>	
15.1	The Microanatomy of Animal Cells	163
15.2	The Structure of Epithelial and Endothelial Tissues in the Host	164
15.3	Principles of Signal Transduction	166
15.4	Interaction Between Microorganisms and Host Cell Receptors	170
15.5	Induced Rearrangements of the Cytoskeleton	170
15.6	Cellular Microbiology and Toxins	172
15.7	Endocytosis and Vesicle Transport	173
15.8	Microbes and Apoptosis	175
	Bibliography	178
Chapter 16	In Vivo Expression of Pathogenicity	181
	<i>M. Hensel</i>	
16.1	Gene Expression In Vitro and In Vivo	181
16.2	Gene Expression in the Stationary Phase	182
16.3	Experimental Approaches to the Analysis of In Vivo Gene Expression	183
16.3.1	Proteomic Analysis and Subtraction Techniques	184
16.3.2	Genetic Methods	184
16.3.3	DNA Chip Technology	185
	Bibliography	186
Chapter 17	Genomics, Transcriptomics, and Proteomics	187
	<i>J. Reidl and J. Hacker</i>	
17.1	Bacterial Genome Research	187
17.2	Genome Analysis: Applications in Infection Biology	189
17.3	DNA Arrays	190

17.4	Analysis of Protein Patterns (Proteome)	191
	Bibliography	193
Chapter 18	Molecular Diagnosis and Epidemiology	195
	<i>J. Hacker and J. Heesemann</i>	
18.1	Determination of Species and Subspecies	195
18.1.1	Classical Methods	195
18.1.2	Molecular Methods	196
18.1.3	In Situ Hybridizations	200
18.2	Determination of Pathotypes	200
18.3	Determination of Resistance	201
18.4	Molecular Epidemiology	202
18.5	Integrated Approaches: Use of Microarrays	204
	Bibliography	205
Chapter 19	Therapeutic Problems with Infectious	
	Diseases	207
	<i>W. Ziebuhr</i>	
19.1	Development of Antibiotic Resistance in Bacteria	207
19.2	Molecular Mechanisms of Antibiotic Resistance	209
19.2.1	Resistance Due to Modification of the Antibiotic	209
19.2.2	Resistance Due to Modification of the Target	
	Structure	209
19.2.3	Active Efflux and Multidrug Resistance	210
19.3	Trends in the Development of New Antibiotics	210
19.3.1	Fluorquinolones	211
19.3.2	Streptogramins	211
19.3.3	Oxazolidinones	211
19.3.4	Lantibiotics	212
19.4	New Concepts in the Treatment of Infections	212
	Bibliography	213
Chapter 20	The Development of Vaccines	215
	<i>J. Heesemann</i>	
20.1	The History of Vaccine Development	215
20.2	The Principles of Vaccine Development	216
20.3	Killed/Inactivated Vaccines	218
20.4	Adjuvants	220
20.5	Live Vaccines	221
	Bibliography	222
Chapter 21	Infection Models	225
21.1	<i>Escherichia coli</i> (J. Hacker)	225
21.1.1	General Remarks	225
21.1.2	Horizontal Gene Transfer in <i>Escherichia coli</i>	226
21.1.3	<i>Escherichia coli</i> Pathotypes	227
21.2	<i>Vibrio cholerae</i> (J. Reidl)	231
21.2.1	Pathogenesis and Pathogenicity Factors	231
21.2.2	Evolution and Transmission of Virulence Factors	232

21.3	Yersiniae, Shigellae, Salmonellae, and Listeriae (<i>J. Heesemann and M. Hensel</i>)	234
21.3.1	General Remarks	234
21.3.2	<i>Yersinia enterocolitica</i> and <i>Yersinia pseudotuberculosis</i>	235
21.3.3	Shigellae	237
21.3.4	<i>Salmonella enterica</i>	239
21.3.5	<i>Listeria monocytogenes</i>	241
21.4	Staphylococci (<i>W. Ziebuhr</i>)	243
21.4.1	General Remarks	243
21.4.2	Adhesion, Colonization, and Biofilm Formation	244
21.4.3	Staphylococcal Infections	245
21.4.4	Antibiotic Resistance	246
21.4.5	Phenotype Variability as a Pathogenetic Principle	247
21.5	Streptococci (<i>J. Hacker</i>)	247
21.5.1	General Remarks	247
21.5.2	Adherence and Invasion	248
21.5.3	Toxin Formation	250
21.5.4	Environmental Regulation and Phenotype Variability	251
21.6	<i>Legionella pneumophila</i> (<i>J. Hacker</i>)	252
21.6.1	Environmental Bacteria and Pathogenic Agents	252
21.6.2	Intracellular Multiplication in Amoebae and Macrophages	253
21.7	<i>Helicobacter pylori</i> (<i>R. Haas</i>)	256
21.7.1	The <i>Helicobacter pylori</i> Infection	256
21.7.2	Microbiology of <i>Helicobacter pylori</i>	257
21.7.3	Virulence Factors in <i>Helicobacter pylori</i>	257
21.7.4	Diagnosis and Therapy	258
21.8	<i>Toxoplasma gondii</i> (<i>J. Heesemann</i>)	259
21.8.1	General Remarks	259
21.8.2	Form and Ultrastructure	260
21.8.3	Invasion Mechanisms	260
21.8.4	Stage Conversion	261
21.9	<i>Candida albicans</i> (<i>J. Hacker</i>)	262
21.9.1	Fungal Infections – the Host Is Crucial	262
21.9.2	Pathogenicity in <i>Candida albicans</i>	262
21.9.3	Dimorphism and Phenotypic Switching	264
	Bibliography	266
Chapter 22	Future Developments	271
	<i>J. Hacker and J. Heesemann</i>	
	Bibliography	275
Chapter 23	Methods of Molecular Infection Biology	277
23.1	Introduction (<i>J. Hacker</i>)	277
23.2	Molecular Typing of Pathogens (<i>W. Ziebuhr</i>)	277
23.3	Fluorescence-Based In Situ Hybridization (<i>J. Hacker</i>)	280
23.4	Island Probing (<i>J. Hacker</i>)	282
23.5	Representative Difference Analysis (<i>J. Hacker</i>)	283
23.6	mRNA Differential Display (<i>J. Hacker</i>)	285

23.7	In Vivo Expression Technology (<i>M. Hensel</i>)	286
23.8	Signature-Tagged Mutagenesis (<i>M. Hensel</i>)	288
23.9	Reporter Gene Technologies (<i>M. Hensel</i>)	289
23.10	Differential Fluorescence Induction (<i>M. Hensel</i>)	290
23.11	Identification of Virulence-Associated Bacteriophages (<i>J. Reidl</i>)	291
23.12	Shuttle Mutagenesis (<i>R. Haas</i>)	293
23.13	Genomics (<i>J. Reidl</i>)	295
	Bibliography	296
Appendix	301
Index	323
