<i>Preface</i>	<i>vii</i>
<i>Acknowledgements</i>	<i>ix</i>
<b>1. Onset of the 'Quantum' Hypothesis</b>	<b>1</b>
1.1 Introduction	1
1.2 Maxwell's Equations	2
1.3 Physical Significance of Maxwell's Equations	3
1.4 Electromagnetic Wave and its Velocity	3
1.5 Transverse Nature of Electromagnetic Waves	4
1.6 Electromagnetic Power Flow and Poynting Vector	6
1.7 Conclusions from the Electromagnetic Theory	7
1.8 Black Body Radiation	9
1.9 The Rayleigh-Jeans Formula	11
1.10 Ultraviolet Catastrophe	14
1.11 Planck's Hypothesis	14
1.12 Planck's Radiation Formula	14
1.13 Wien's Law and Rayleigh Jean's Law as Special Cases of Planck's Law	16
1.14 Wien's Displacement Law from Planck's Formula	17
1.15 Stefan's Law from Planck's Formula	18
1.16 Properties of photons	19
1.17 Photons and Gravity	20
1.18 Photoelectric Effect	22
1.19 Einstein's Photoelectric Equation	25
1.20 Compton Effect (Scattering of Hard X-rays or $\gamma$ -rays)	26
1.21 Role of constants $C$ and $H$ in Physics	28
1.22 The Electron Volt	29

<b>2. Relativistic Mechanics</b>	<b>34</b>
2.1 The Space Time Monifold	34
2.2 Homogeneity of Space and Time	35
2.3 Motion of Free Bodies	36
2.4 Frame of Reference	36
2.5 Galelian Transformations	37
2.6 Newtonian Relativity	38
2.7 The Velocity of Light	38
2.8 Failure of Newtonian Mechanics	39
2.9 Newtonian relativity and Electromagnetism	39
2.10 The Concept of Aether	40
2.11 Michelson-Morley Experiment	40
2.12 Einstein's Postulates of Special Theory of Relativity	43
2.13 Lorentz - Transformations	43
2.14 Velocity Transformation	47
2.15 Lorentz Fitzgerald Length - Contraction	48
2.16 Time Dilation	50
2.17 Proper Time	51
2.18 Isotropy of Time	52
2.19 Consequences of the Velocity Exceeding that of Light	52
2.20 Geometry of Space-Time (The Minkowski representation of the Lorentz transformation)	53
2.21 Relativity and the Fundamental Concepts of Newtonian Mechanics	56
2.22 Energy-Momentum Vector	58
2.23 Momentum Four-Vector and Force Four-Vector	59
2.24 Relation between Momentum and Energy	62
2.25 Energy Equation in Relativity	63
2.26 Equivalence of Energy and Mass	65
2.27 Relativistic Four Vector and d' Alembertian Operator	66
2.28 Relativity and Electromagnetic Theory	67
2.29 Covariant Form of the Maxwell's Electromagnetic Equations	69
2.30 Relativistic Doppler Effect	73
2.31 World Regions and the Light Cone	76
<b>3. Atomic Structure and Spectra</b>	<b>83</b>
3.1 Atomic View of Matter	83
3.2 Discharge of Electricity through Gases (Cathode Rays)	84
3.3 Millikan's Oil Drop Experiment for Electron Charge	86
3.4 The Mass of Electron	88

3.5 Positive Rays	91
3.6 Thomson's Parabola Method for Positive Rays Analysis	91
3.7 Discovery of Isotopes	94
3.8 Atomic Weight and Atomic Mass	95
3.9 Atomic Models	95
3.10 Rutherford's Experiment and Atomic Model	96
3.11 The Spectra of Hydrogen	103
3.12 Bohr Theory of the Spectrum of the Hydrogen Atom	104
3.13 Drawbacks of Bohr's Theory	108
3.14 Correction for the Finite Mass of the Nucleus	108
3.15 Discovery of Heavy Hydrogen	110
3.16 Atomic Excitation	111
3.17 The Franck-Hertz Experiment	112
3.18 Bohr's Correspondence Principle	114
3.19 Wilson-Sommerfeld Rules of Quantisation	116
3.20 Sommerfeld's Elliptical Orbits	118
3.21 Sommerfeld's Relativity Correction	124
3.22 Shortcomings of Old Quantum Theory	128
3.23 Space Quantisation	129
3.24 Wave numbers for alkali spectrum	135
3.25 Spectroscopic Notation (Sodium Spectrum) and Electron Spin	135
3.26 The L-S Coupling	137
3.27 Lande's Vector Model of the Atom	137
3.28 J-J Coupling	139
3.29 Selection Rules	139
3.30 Intensity Rules	140
3.31 Fine Structure of the $H_{\alpha}$ Line	140
3.32 Fine Structure of Sodium D Line	141
3.33 The Stern-Gerlach Experiment	142
<b>4. The Basic Quantum Mechanics</b>	<b>146</b>
4.1 de Broglie's Matter Waves	147
4.2 Absence of Matter Waves in Macroscopic World	148
4.3 Davisson and Germer's Experiment on Diffraction of Electrons	149
4.4 Matter Waves (due to Electrons) in Atoms	151
4.5 Is the Wave Particle Duality Real?	152
4.6 Quantum Properties of Micro Particles	153
4.7 Development of the Quantum Mechanics	155
4.8 Probabilistic Description of Photons (Double Slit Experiment)	156

4.9 Particle/Waves in Classical Physics and Quantum Physics (Physical Basis of the Double Slit Experiment)	157
4.10 The concept of Wave Function and its Physical Significance	160
4.11 The Form of Wave Function for Matter Wave (Wave Packet, Group Velocity and Phase Velocity)	160
4.12 Heisenberg's Uncertainty Principle (Position - Momentum Uncertainty)	163
4.13 Fourier Integral Theorem	165
4.14 Energy-time Uncertainty	166
4.15 Heisenberg's Microscope - Experiment	167
4.16 Applications of Uncertainty Principle	168
4.17 Operations of Observation	170
4.18 Operators and Observations	171
4.19 Two Physical Postulates	172
4.20 Schrodinger Equation (Time Dependent Form)	173
4.21 Commutation Relations	175
4.22 Time-Independent Schrodinger Equation (Steady State Form)	176
4.23 Equation of Continuity and Probability Current Density	177
4.24 Angular Momentum Operators and its Representation in Spherical Polar Coordinate	178
4.25 Expectation Values	182
4.26 Schwartz's Inequality	185
4.27 Derivation of Heisenberg's Uncertainty Principle using Commutation Relations	186
4.28 Applications of Schrodinger's Equation	188
4.29 Schrodinger's Relativistic Wave Equation (Klein-Gordon Equation)	217
4.30 Dirac's Relativistic Equation	219
4.31 Negative Energy States	224
4.32 Pair Creation and Pair Annihilation	224
<b>5. Hydrogen Atom and Periodic Table</b>	<b>227</b>
5.1 Schrodinger Equation for the Hydrogen Atom	227
5.2 Solution of Schrodinger Equation	228
5.3 Quantum Numbers	237
5.4 Eigen Functions	238
5.5 Pauli Exclusion Principle	245
5.6 Shells and Subshells in Atoms	246
5.7 Aufbau Principle and the Periodic Table	247
5.8 Prominent Features of the Periodic Table	248
5.9 <i>s, p, d, f</i> Block Elements	250

5.10 Hund's Rule	251
5.11 Penetrating and Non-penetrating orbits	253
<b>6. Statistical Mechanics (An Introduction)</b>	<b>254</b>
6.1 Introduction	254
6.2 Macroscopic and Microscopic States	254
6.3 Phase Space	255
6.4 Maxwell Boltzmann Statistics	258
6.5 Fermi Dirac Statistics	263
6.6 Bose Einstein Statistics	265
6.7 The Photon Gas	267
<b>7. X-Rays</b>	<b>269</b>
7.1 Discovery of X-rays	269
7.2 Production of X-rays	269
7.3 Properties of X-rays	271
7.4 Practical Applications of X-rays	271
7.5 Scattering of X-rays (Thomson's Theory)	272
7.6 Determination of the Number of Electrons Per Atom	277
7.7 The Continuous X-ray Spectrum and characteristic X-radiation	278
7.8 X-ray Energy Levels	282
7.9 The Absorption Edge	282
7.10 Filter	284
7.11 The (Characteristic) X-ray Emission Spectra and Moseley's Law	284
<b>8. Physics of Solids</b>	<b>290</b>
8.1 Crystalline and Amorphous Solids	290
8.2 Space-Lattice and Primitive Cell	291
8.3 The Seven Crystal Systems	292
8.4 Symmetry Elements in Crystals	292
8.5 Quasicrystals	297
8.6 Some Important Crystal Structures	298
8.7 Miller Indices	305
8.8 Spacing of a Set of Crystal Planes	306
8.9 Reciprocal Lattice	307
8.11 Crystal Structure Determination using Diffraction	312
8.12 Brillouin Zones	322
8.13 Bonding in Solids	326
8.14 Drude's Model and Drude Lorentz Theory	349
8.15 Energy Bands in Solids	354

8.16	Crystal Momentum	366
8.17	The Concept of Effective Mass	367
8.18	The Concept of Holes	368
8.19	Sommerfeld's Electron Theory of Metals	370
8.20	The Density of States Function	373
8.22	Electronic Specific Heat	384
8.23	Pauli Paramagnetism	386
8.24	Hall Effect	388
8.25	Fermi Surfaces	393
8.26	Variations in the Free Electron Fermi-Surface of a Square Lattice According to the Valence of the Metal	395
8.27	Fermi Surface and Brillouin Zones	397
8.28	Divalent Metals	398
8.29	Constant Energy Contours	399
8.30	Phonons	400
8.31	Vibrations of a Linear (One-dimensional) Monatomic Chain	400
8.32	Lattice Vibrations of a Linear Diatomic Chain	404
8.33	Specific Heat of Solids	409
8.34	Semiconductors	418
8.35	P-N Junction	429
8.36	Diffusion and Drift Currents in Semiconductors (and Einstein's Relation)	437
8.37	Solar Cell	438
8.38	Hall Effect in Semiconductors	443
<b>9.</b>	<b>Imperfections in Crystals</b>	<b>446</b>
9.1	What is an Imperfection?	446
9.2	Importance of Lattice Defects (Imperfections)	446
9.3	Types of Imperfections	447
9.4	Point Defects	447
9.5	Polarons	454
9.6	Excitons	455
9.7	Dislocations	458
9.8	Plane or Surface Defects	462
<b>10.</b>	<b>Magnetic Properties of Materials</b>	<b>465</b>
10.1	Magnetic Materials	465
10.2	Origin of Permanent Magnetic Dipoles in Matter	466
10.3	Concept of Magnetic Susceptibility	467
10.4	Magnetic Quantities	468
10.5	Classification of Magnetic Materials	469

10.6	Langevin's Theory of Diamagnetism	470
10.7	Quantum Theory of Diamagnetism	473
10.8	Langevin's Theory of Paramagnetism	476
10.9	Quantum Theory of Paramagnetism	479
10.10	Ferromagnetism	483
10.11	Heisenberg's Exchange Interactions in Ferromagnets	487
10.12	Ferromagnetic Domains and Hysteresis	489
10.13	Closure Domains	490
10.14	Bloch Wall	492
10.15	Antiferromagnetism	492
10.16	Ferrimagnetism	497
10.17	Soft and Hard Magnetic Materials	501
<b>11.</b>	<b>Superconductivity</b>	<b>505</b>
11.1	Introduction	505
11.2	Superconducting Systems	506
11.3	High Temperature Superconductors	508
11.4	Isotope Effect	509
11.5	Critical Magnetic Field	510
11.6	Meissner Effect	510
11.7	Superconductors Compared with a Perfect Conductor	510
11.8	Specific Heat	512
11.9	Energy Gap	513
11.10	Thermodynamics of a Superconductor	514
11.11	London Theory	517
11.12	Pippard's Equation and Coherence Length	518
11.13	Classification of Superconductors	520
11.14	The Mixed State	522
11.15	Theory of Superconductivity (Qualitative Ideas)	523
11.16	Flux Quantisation	527
11.17	Josephson Junction and Josephson Effect	528
11.18	Some Practical Josephson Junctions	528
11.19	DC Josephson Effect (Josephson Junction's Working Principle)	530
11.20	AC Josephson Effect	532
11.21	SQUIDS	534
11.22	DC SQUID (A Superconducting Loop with Two Josephson Junctions)	535
11.23	Method of Preparation for High $T_C$ Superconductors	538
11.24	Properties of High Temperature Superconductors	539
11.25	Applications of Superconductivity	540

11.26 Superconducting Magnets	541
11.27 Applications of High $T_C$ Oxide Superconductors	541
11.28 Challenges and Possibilities for Applications of using High $T_C$ Materials	542
11.29 Structure of High $T_C$ Cuprate Superconductor Materials	542
<b>12. Interaction of Atoms with External Fields and Radiation</b>	<b>546</b>
12.1 Normal Zeeman Effect	546
12.2 Anomalous Zeeman Effect	548
12.3 Paschen Back Effect	550
12.4 Stark Effect	553
12.5 Scattering of Light	555
12.6 Laser	560
12.7 Principle of Laser	563
12.8 Methods of Achieving Population Inversion	564
12.9 The Laser Cavity	565
12.10 Ruby Laser	566
12.11 Helium – Neon Laser	567
12.12 Semiconductor Laser	568
12.13 Applications of Lasers	570
<b>13. Nuclear Physics</b>	<b>572</b>
13.1 Structure of Nuclei and Nuclear Constituents	572
13.2 Discovery of Neutron	573
13.3 Proton-Neutron Theory	575
13.4 Types of Nuclei	575
13.5 Nuclear Size	576
13.6 Dependence of the Nuclear Radii on the Mass Number	577
13.7 Nuclear Radii and Quadrupole Moment	577
13.8 Atomic Mass Unit, Mass Defect and Nuclear Binding Energy	579
13.9 Liquid Drop Model of the Nucleus	580
13.10 Weizsacker Semi-empirical Mass Formula	581
13.11 Nuclear Stability	585
13.12 Packing Fraction	586
13.13 Separation Energy of the Last Nucleon	588
13.14 Equation of Mass Parabolas for Isobaric Nuclei	588
13.15 Examples of Mass Parabolas for Isobaric Nuclei	591
13.16 The Nucleus—A Classical or a Quantum System?	592
13.17 Quantum Properties of Nuclei	593
13.18 Mirror Nuclei	597

13.19	Coulomb Energies of Mirror Nuclei	598
13.20	Nuclear Force	599
13.21	Two Nucleon Problem	606
13.22	Shell Model of the Nucleus	609
13.23	Collective Model of the Nucleus	613
<b>14.</b>	<b>Radioactivity and Nuclear Reactions</b>	<b>620</b>
14.1	Natural Radioactivity	620
14.2	Properties of Radioactive Radiations	622
14.3	Nuclear-Decay	623
14.4	Laws of Radioactive Decay	624
14.5	Radioactive Equilibrium	628
14.6	Radioactive Dating (Carbon Dating)	632
14.7	Radioactive Series	633
14.8	Beta Ray Spectra and Neutrino Hypothesis	635
14.9	Nuclear Reactions	636
14.10	Compound Nucleus Hypothesis	637
14.11	Kinetic Energy of the Projectile Required for Nuclear Reaction	637
14.12	Conservation Laws in Nuclear Reactions	637
14.13	$Q$ Value of a Nuclear Reaction	638
14.14	The $Q$ Equation	639
14.15	Solution of the $Q$ Equation	640
14.16	Artificial Nuclear Transmutation	645
14.17	Cross-Section of Nuclear Reactions	648
14.18	Concept of Scattering Cross Section	650
<b>15.</b>	<b>Nuclear Fission and Fusion</b>	<b>654</b>
15.1	Discovery of Nuclear Fission	654
15.2	Energy Released in Fission	655
15.3	Chain Reaction	656
15.4	Fission Products in Nuclear Fission	657
15.5	Theory of Nuclear Fission on the Basis of Liquid Drop Model	658
15.6	Energy in Spontaneous Fission	660
15.7	Critical Assembly	662
15.8	Nuclear Reactor	662
15.9	Parts of a Nuclear Reactor	663
15.10	Natural Uranium Reactors	664
15.11	Breeder Reactor	665
15.12	Power Reactors	666
15.13	Neutron Cycle in a Thermal Nuclear Reactor (The Four Factor Formula)	666

15.14	Delayed Neutrons	669
15.15	Atom Bomb	669
15.16	Nuclear Fusion	670
15.17	Salient Features of the Fusion Process	671
15.18	Nuclear Reaction Rate	673
15.19	Lawson Criterion	675
15.20	Conditions for Thermonuclear Reaction	675
15.21	Heating of Plasma	676
15.22	Confinement of Plasma	676
<b>16.</b>	<b>Accelerators and Detectors of Elementary Particles</b>	<b>687</b>
16.1	Types of Particle Detectors	687
16.2	Gas Filled Ionization	688
16.3	Track Detectors	700
16.4	Need for Acceleration of Charged Particles	706
16.5	The Basic Mechanism of Acceleration	707
16.6	Types of Particle Accelerators	708
<b>17.</b>	<b>The Universe</b>	<b>724</b>
17.1	Introduction	724
17.2	Galaxy	725
17.3	Our Galaxy (The Milky Way)	726
17.4	Star Clusters	727
17.5	The Composition of Stars and Galaxies	727
17.6	Classification of Stars According to their Spectra	727
17.7	Hertzsprung-Russell Diagram	728
17.8	Structure of the Sun	729
17.9	Temperature of the Sun	731
17.10	Surface Phenomena on the Sun (Sun Spots and Solar Activity)	731
17.11	The Earth-Moon System	732
17.12	Composition of Earth's Internal Shells and Earth's Magnetic Field	733
17.13	Van Allen's Radiation Belts	737
17.14	Aurorae	738
17.15	Earth's Magnetosphere	738
17.16	Stellar Energy (Carbon Cycle)	739
17.17	Proton-Proton Cycle	741
17.18	Stellar Evolution	742
17.19	White Dwarfs and Black Dwarfs	745
17.20	Chandrasekhar Limit	745

17.21 Neutron Stars	751
17.22 Radio Sources	751
17.23 Quasars	752
17.24 Pulsars	753
17.25 Black Holes	753
17.26 The Expanding Universe	754
17.27 The Origin of the Universe (Big Bang Theory)	755
17.28 Hoyle – Narlikar’s Theory of Gravity (Basic Idea)	758
17.29 Curvature of Space-time Manifold	759
17.30 The Solar Neutrino Puzzle	760
<b>18. Elementary Particles</b>	<b>761</b>
18.1 Discovery of Elementary Particles	761
18.2 Classification of Elementary Particles	762
18.3 Strange Particles	766
18.4 Quantum Numbers of Elementary Particles	768
18.5 The $\tau$ - $\theta$ Puzzle	776
18.6 Particles, Antiparticles and Antimatter	778
18.7 Unitary Symmetry	781
18.8 Unitary Transformation Induced by a Rotation	781
18.9 The Isospin Invariance, the SU (2) Group and Unitary Symmetry	783
18.10 Weight Diagrams	784
18.11 SU (3) Groups	785
18.12 SU (3) Multiplets	787
18.13 Building up of the Supermultiplets from the Three ‘Quarks’	789
18.14 The “Eightfold Way” and the Quark Model	790
18.15 Gluons	796
18.16 Standard Model of Particle Physics	797
18.17 Symmetries and Conservation Laws	799
18.18 Violation of C Invariance	805
18.19 C-P Violation in Neutral K-Meson Decays	805
18.20 The C-P-T Theorem	806
18.21 Resonance Particles	807
18.22 Fundamental Interactions in Nature	808
18.23 Nature of Fundamental Interactions	809
18.24 Unification of Fundamental Forces	813
18.25 Discovery of $\Omega$ - Hyperon	815
18.26 Quark Content of Mesons and Baryons	816
18.27 Planck’s Units: (The Units of Fundamental Importance in Physics)	817

**Appendices**

1. Prefixes and Greek Symbols	821
2. Physical Constants with their Values in SI Units	825
3. Units of Measurement	827
4. Spin Magnetic Moment and Pauli Spin Matrices	832
5. Dirac Delta Function	834
6. Major Facts about the Earth and Earth's Atmosphere	835
7. An Overview of Group-representations and Weight Vectors Perceived in Chapter 18	837
8. The Solar System	840
9. An Electron Microscope	842
10. The Quantum Particles (Bosons and Fermions)	844
11. Dirac Notations in Quantum Mechanics	846
12. Some Conversion Factors	848
13. Physical Dimensions of Some Typical Objects	849
14. Some Mathematical Relations	850
